

Jest project

1. Create a project folder
2. Create package.json with `npm init`

```
> npm init -y
```

Or

```
> npm init
```

and answer the questions

3. Install jest as devDependencies

```
> npm install jest --save-dev
```

This modifies package.json by adding devDependencies to it

```
"devDependencies": {  
  "jest": "^27.0.6"  
}
```

4. Modify test-script in package.json

```
"scripts": {  
  "test": "jest"  
}
```
